Implementing Article 19, Recast Renewable Energy Directive
Article 19 of the recast EU Renewable Energy Directive, which entered into force at the end of 2018, both expands the use of Guarantees of Origin in the EU and strengthens the systems that support their use. In this detailed analysis of the Article, RECS International sets out its headline priorities for the article’s implementation by EU Member States, and provides detailed guidance on how these priorities can be achieved. The document also provides a comparison, with line by line commentary, between the new Article 19 and its predecessor, Article 15 of the first Renewable Energy Directive (2009/28/EC).
Principles for the implementation of RED-2 Art.19

1. The translation of the RED-2 Article 19 from the Official Journal’s English text into other EU languages must be accurate, especially on the crucial difference between ‘shall’ and ‘may’.

2. The use of GOs in different EU Member States should be harmonised and standardised. An important step to achieving this will be ensuring that every EU Member State has a nationally mandated body as a full AIB member.

3. GOs should be issued for all RES electricity production, whether subsidised or not, so that every consumer can know about the power they are using.

4. In implementing Article 19 of the RED-2, Member States should move beyond basic implementation and towards the development of ‘full disclosure’ systems where every megawatt hour of electricity production is certified by a GO.

Implementing RED-2, Article 19

Art. 19.1 text
For the purposes of proving to final customers the share or quantity of energy from renewable sources in an energy supplier’s energy mix and in the energy supplied to consumers under contracts marketed with reference to the consumption of energy from renewable sources, Member States shall ensure that the origin of energy produced from renewable sources can be guaranteed as such within the meaning of this Directive, in accordance with objective, transparent and non-discriminatory criteria.

Basic implementation
All Member States should have a nationally mandated organisation as a full member of the Association of Issuing Bodies and, through that membership and implementation of this article, should ensure that their GO system adheres fully to the EECS standard, which will automatically ensure adherence to Article 19.6.

The goal of membership in the AIB and adherence to these standards should be the harmonisation and standardisation of the GO system across EU Member States and with regards to GOs to and from third countries. The principle aim of the GO system should be the provision of clear information on the origin of power being supplied to consumers.

Advanced implementation
Market actors and end-users/consumers of all types should be able to open GO trading accounts and/or cancellation accounts in all domains. This action will support renewable energy cooperatives, engaged homeowners and corporate end-users. In addition this would allow national energy authorities to directly receive all relevant and correct information about the electricity consumed in their borders for more precise fuel-mix disclosures and residual mix calculations.

Customer specific cancellations should be possible in all registries, independent of whether the electricity supplier, agent or any other account holder do the cancellation.
Implementing RED-2, Article 19

<table>

<th>Basic implementation</th>
<th>Advanced implementation</th>
</tr>
</thead>
<tbody>
<tr>
<td>To that end, Member States shall ensure that a guarantee of origin is issued in response to a request from a producer of energy from renewable sources, unless for the purposes of accounting for the market value of the guarantee of origin Member States decide not to issue one to a producer that receives financial support from a support scheme. Member States may arrange for guarantees of origin to be issued for non-renewable energy sources. Issuance of guarantees of origin may be made subject to a minimum capacity limit. A guarantee of origin shall be of the standard size of 1 MWh. No more than one guarantee of origin shall be issued in respect of each unit of energy produced.</td>
<td>As noted under the implementation of 19.1 (see above), adherence to the AIB’s EECS rules will ensure that Member States meet the basic requirements for running GO systems. All renewable energy, whether benefiting from a support scheme or not, should receive a GO. All Member States should provide for producers of non-renewable energy to request the issuance of a GO per MWh of power. Member States should work together and with the European Commission and other stakeholders to define a pan-EU minimum capacity limit for the issuance of GOs.</td>
<td>All Member States must have a nationally mandated organisation as a full member of the Association of Issuing Bodies and must ensure that their GO system adheres fully to the EECS standard. All renewable energy, whether benefiting from a support scheme or not, must receive a GO. All Member States should require that producers of all energy are issued with GOs for each MWh of power they produce. Member States must work together and with the European Commission and other stakeholders to define a pan-EU minimum capacity limit for the issuance of GOs.</td>

### Implementing RED-2, Article 19

<table>
<thead>
<tr>
<th>Art. 19.2 text (3)</th>
<th>Basic implementation</th>
<th>Advanced implementation</th>
</tr>
</thead>
</table>
| It shall be presumed that this is the case when:  
  a. the financial support is granted by way of a tendering or a tradable green certificate system;  
  b. the market value of the guarantees of origin is administratively taken into account in the level of financial support; or  
  c. the guarantees of origin are not issued directly to the producer but to a supplier or consumer who buys the renewable energy either in a competitive setting or in a long-term corporate renewables power purchase agreement. | Basic implementation should be achieved through adherence to the EECS standard.  
All renewable energy, whether benefiting from a support scheme or not, **should** receive a GO. | Advanced implementation will be achieved through adherence to the EECS standard and AIB membership.  
All renewable energy, whether benefiting from a support scheme or not, **must** receive a GO. |
Implementing RED-2, Article 19

Art. 19.2 text (4)

To take into account the market value of the guarantee of origin Member States may, inter alia, decide to issue a guarantee of origin to the producer and cancel it immediately.

The guarantee of origin shall have no function in terms of a Member State’s compliance with Article 3. Transfers of guarantees of origin, separately or together with the physical transfer of energy, shall have no effect on the decision of Member States to use statistical transfers, joint projects or joint support schemes for target compliance or on the calculation of the gross final consumption of energy from renewable sources in accordance with Article 7.

Basic implementation

Basic implementation should be achieved through adherence to the EECS standard.

All renewable energy, whether benefiting from a support scheme or not, should receive a GO.

GOs shall not be used for target compliance or for the calculation of the gross final consumption of energy from renewable sources in accordance with Article 7. This shall be respected by any GO (power, heating and cooling, gas).

Advanced implementation

Advanced implementation will be achieved through adherence to the EECS standard and AIB membership.

All renewable energy, whether benefiting from a support scheme or not, must receive a GO. A 2-tiered support system could be used - allowing less support to generators who retain their GOs. This could be voluntarily requested. GOs from generation technologies in high demand will benefit most from this scenario.

GOs shall not be used for target compliance or for the calculation of the gross final consumption of energy from renewable sources in accordance with Article 7. This shall be respected by any GO (power, heating and cooling, gas).
## Implementing RED-2, Article 19

### Art. 19.3 text

For the purposes of paragraph 1, guarantees of origin shall be valid for twelve months after the production of the relevant energy unit. Member States shall ensure that all guarantees of origin that have not been cancelled shall expire at the latest 18 months after the production of the energy unit. Expired guarantees of origin shall be included by Member States in the calculation of the residual energy mix.

### Basic implementation

Member States **should** work together and with the European Commission and other stakeholders to determine the status of a GO in the 6 month period in which it may no longer be valid nor be expired.

EU Member States **should** follow the same process and timing for the cancellation and expiry of GOs, in this way end-users and their suppliers can operate with clarity and confidence throughout the internal electricity market. The preference **should** be that a GO produced in a given month is valid until the end of the same month the following year. GOs should be deleted a maximum of 18 months after the production month. Thereafter all unused GOs will lose their validity.

### Advanced implementation

Member States **must** work together and with the European Commission and other stakeholders to determine the status of a GO in the 6 month period in which it may no longer be valid nor be expired.

Member States **must** improve the harmonization of GO issuance, cancelation and expiry though the AIB by agreeing an “issuing timestamp” mechanism to ensure common practice as regards the timing of issuance of GOs could allow for more granularity on issuance, cancellation and expiry – making it possible for GOs to be issued on a higher frequency, for example on a daily basis.
### Implementing RED-2, Article 19

#### Art. 19.4 text

For the purposes of disclosure referred to in paragraphs 8 and 13, Member States shall ensure that guarantees of origin are cancelled by energy companies at the latest 6 months after the end of the validity of the guarantee of origin.

---

#### Basic implementation

Member States should ensure that fuel-mix disclosure (FMD) is conducted at least once a year.

Communication of fuel-mixes should be auditable by an independent organisation and communicable in such way that all fuel-mixes can be easily understood and compared by end users.

---

#### Advanced implementation

Member States should ensure that the FMD is simple and easily accomplished. FMD should be conducted on an automated basis as much as possible, in order to provide a most contemporary FMD.

Communication of fuel-mixes should be auditable by an independent organisation and communicable in such way that all fuel-mixes can be easily understood and compared by end users.
Implementing RED-2, Article 19

**Art. 19.5 text**
Member States or designated competent bodies shall supervise the issuance, transfer and cancellation of guarantees of origin. The designated competent bodies shall have non-overlapping geographical responsibilities, and be independent of production, trade and supply activities.

**Basic implementation**
Basic implementation should be achieved through adherence to the EECS standard.

**Advanced implementation**
Advanced implementation will be achieved through adherence to the EECS standard and membership of the AIB.
## Implementing RED-2, Article 19

<table>
<thead>
<tr>
<th>Art. 19.6 text</th>
<th>Basic implementation</th>
<th>Advanced implementation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Member States or the designated competent bodies shall put in place appropriate mechanisms to ensure that guarantees of origin shall be issued, transferred and cancelled electronically and are accurate, reliable and fraud-resistant. Member States and designated competent bodies shall ensure that the requirements they impose are compliant with the standard CEN - EN 16325.</td>
<td>Basic implementation should be achieved through adherence to the EECS standard as this will ensure adherence with the CEN-EN 16325 standard</td>
<td>Advanced implementation will be achieved through adherence to the EECS standard and membership of the AIB.</td>
</tr>
</tbody>
</table>
### Art. 19.7 text (1)

A guarantee of origin shall specify at least:

- **a.** the energy source from which the energy was produced and the start and end dates of production
- **b.** whether it relates to: electricity; or gas, including hydrogen; or heating or cooling
- **c.** the identity, location, type and capacity of the installation where the energy was produced;
- **d.** whether the installation has benefited from investment support and whether the unit of energy has benefited in any other way from a national support scheme, and the type of support scheme;

### Basic implementation

Basic implementation should be achieved through adherence to the EECS standard as this will ensure adherence with the details required for GOs in this paragraph.

### Advanced implementation

Advanced implementation should be achieved through adherence to the EECS standard and Membership of the AIB as this will ensure adherence with the details required for GOs in this paragraph.
Implementing RED-2, Article 19

**Art. 19.7 text (2)**

- the date on which the installation became operational; and
- the date and country of issue and a unique identification number.

Simplified information may be specified on guarantees of origin from installations of less than 50 kW.

---

**Basic implementation**

The definition of “simplified information of GOs from less than 50kW” should be implemented with care. It should be avoided that the simplified information results in a second-tier quality GO with less information and less reliability. The GO needs to remain a fact-based instrument and seen as an undisputed representation of the actual MWhs produced by a production device, regardless of size.

Member States should work together and with the European Commission and other stakeholders to define the information required in GOs from smaller installations.

---

**Advanced implementation**

Member States must work together and with the European Commission and other stakeholders to define the information required in GOs from smaller installations.
### Art. 19.8 text (1)

Where an electricity supplier is required to demonstrate the share or quantity of energy from renewable sources in its energy mix for the purposes of point (a) of Article 3(9) of Directive 2009/72/EC, it shall do so by using guarantees of origin except:

(a) as regards the share of its energy mix corresponding to non-tracked commercial offers, if any, for which the supplier may use the residual mix; or

(b) where a Member State decides not to issue guarantees of origin to a producer that receives financial support from a support scheme.

### Basic implementation

Member States must ensure a clear differentiation between electricity that is tracked using a GO and that which is part of the residual mix. Suppliers and regulatory authorities must ensure that products sold to end-consumers are only based upon GOs or the residual mix. No longer should a supplier provide an electricity product, RES or Non-RES, that is not based upon GOs. Any product that is not tracked with GOs can only be based upon the residual mix calculation.

It is essential that the translation of this article maintains the firm requirement, not only the possibility, on the use of GOs to prove the share or quantity in a supplier’s energy mix.

### Advanced implementation

EU Member States must work together and with the European Commission and other stakeholders to ensure that across the Union there is a firm requirement, not only the possibility, on the use of GOs to prove the share or quantity in a supplier’s energy mix.
Implementing RED-2, Article 19

</tbody>
</table>
Implementing RED-2, Article 19

**Art. 19.9 text**

Member States shall recognise guarantees of origin issued by other Member States in accordance with this Directive exclusively as proof of the elements referred to in paragraph 1 and paragraph 7 (a) to (f). A Member State may refuse to recognise a guarantee of origin only when it has well-founded doubts about its accuracy, reliability or veracity. The Member State shall notify the Commission of such a refusal and its justification.

**Basic implementation**

The European Commission **should** ensure openness and transparency in this area by publicising any notifications of refusal it receives in a timely manner, followed by its final ruling as to whether it upholds a Member State’s reasons for refusal.

**Advanced implementation**

The European Commission **must** ensure openness and transparency in this area by publicising any notifications of refusal it receives in a timely manner, followed by its final ruling as to whether it upholds a Member State’s reasons for refusal.
Implementing RED-2, Article 19

<td>A Member State may introduce, in conformity with Union law, objective, transparent and non-discriminatory criteria for the use of guarantees of origin in complying with the obligations laid down in Article 3(9) of Directive 2009/72/EC.</td>
<td>This paragraph was part of the original Renewable Energy Directive and no further action is required under the recast Renewable Energy Directive to achieve its implementation.</td>
<td>Member States <strong>must</strong> harmonise their different respective deadlines for issuance, cancellation, expiry, etc. to allow market players to have clarity, predictability and the ability to work across the EU in a uniform manner.</td>
</tr>
</tbody>
</table>
Implementing RED-2, Article 19

The Commission shall present a report assessing options to establish an EU-wide green label with a view to promote the use of renewable energy coming from new installations. Suppliers shall use the information contained in guarantees of origin to prove compliance with the requirements of such a label.

The European Commission should initiate a project working group on this matter, drawing from the experience of a range of stakeholders, including those who can bring experience from outside of the EU as significant work has been done here by both EU and non-EU NGOs and non-profit stakeholders. The core principle of this project is the development of a label that is reliable and easily recognised and understood by all consumers.

EU Member States, along with the European Commission and other stakeholders should work together to evaluate and implement the findings of this report in as effective a way as possible.

<table>
<thead>
<tr>
<th>Article 15.1</th>
<th>Article 19.1</th>
<th>Comparison</th>
</tr>
</thead>
<tbody>
<tr>
<td>For the purposes of proving to final customers the share or quantity of energy from renewable sources in an energy supplier’s energy mix in accordance with Article 3(6) of Directive 2003/54/EC, Member States shall ensure that the origin of electricity produced from renewable energy sources can be guaranteed as such within the meaning of this Directive, in accordance with objective, transparent and non-discriminatory criteria.</td>
<td>For the purposes of proving to final customers the share or quantity of energy from renewable sources in an energy supplier’s energy mix and in the energy supplied to consumers under contracts marketed with reference to the consumption of energy from renewable sources, Member States shall ensure that the origin of energy produced from renewable sources can be guaranteed as such within the meaning of this Directive, in accordance with objective, transparent and non-discriminatory criteria.</td>
<td><strong>GOs will now cover all renewable energy and not only renewable electricity.</strong></td>
</tr>
</tbody>
</table>
### Article 15.2 (1)

To that end, Member States shall ensure that a guarantee of origin is issued in response to a request from a producer of electricity from renewable energy sources. Member States may arrange for guarantees of origin to be issued in response to a request from producers of heating and cooling from renewable energy sources. Such an arrangement may be made subject to a minimum capacity limit. A guarantee of origin shall be of the standard size of 1 MWh. No more than one guarantee of origin shall be issued in respect of each unit of energy produced.

### Article 19.2 (1)

To that end, Member States shall ensure that a guarantee of origin is issued in response to a request from a producer of energy from renewable sources, unless for the purposes of accounting for the market value of the guarantee of origin Member States decide not to issue one to a producer that receives financial support from a support scheme. Member States may arrange for guarantees of origin to be issued for non-renewable energy sources. Issuance of guarantees of origin may be made subject to a minimum capacity limit. A guarantee of origin shall be of the standard size of 1 MWh. No more than one guarantee of origin shall be issued in respect of each unit of energy produced.

### Comparison (1)

The use of guarantees of origin is further expanded in this paragraph, while also being qualified.

Under RED-2, Member States can decide not to issue a GO to a producer that receives financial support.

RED-2 **explicitly allows Member States to issue a GO for energy that is not renewable** – a move towards full disclosure schemes.

A rule is retained stating that installations under a certain size, **which is not defined**, do not have to be issued with a GO.

The principle of 1 GO only per MWh is retained.

<table>

| Member States or the designated competent bodies shall put in place appropriate mechanisms to ensure that guarantees of origin shall be issued, transferred and cancelled electronically and are accurate, reliable and fraud-resistant. | Member States or the designated competent bodies shall put in place appropriate mechanisms to ensure that guarantees of origin shall be issued, transferred and cancelled electronically and are accurate, reliable and fraud-resistant. Member States and designated competent bodies shall ensure that the requirements they impose are compliant with the standard CEN - EN 16325. | **The RED-2 requires that GO systems meet a de jure standard – CEN-EN 16325.**

A de facto ‘standard’ has been in place for a number of years already – that of the European Energy Certificate System set by the Association of Issuing bodies and its members.

The CEN standard is a pared down version of the EECS ‘standard’. Meeting the EECS ‘standard’ would ensure compliance with the CEN-EN 16325 standard.

The CEN standard should be flexible enough to reflect the changing aspect of EU GO systems. |

**Article 15.6 (1)**
A guarantee of origin shall specify at least:

a. the energy source from which the energy was produced and the start and end dates of production;
b. whether it relates to: i. electricity; or ii. heating or cooling;
c. the identity, location, type and capacity of the installation where the energy was produced;
d. whether and to what extent the installation has benefited from investment support, whether and to what extent the unit of energy has benefited in any other way from a national support scheme, and the type of support scheme;

**Article 19.7 (1)**
A guarantee of origin shall specify at least:

a. the energy source from which the energy was produced and the start and end dates of production;
b. whether it relates to: electricity; or gas, including hydrogen; or heating or cooling;
c. the identity, location, type and capacity of the installation where the energy was produced;
d. whether the installation has benefited from investment support and whether the unit of energy has benefited in any other way from a national support scheme, and the type of support scheme;

**Comparison**
The RED-2 paragraph 19.7 is a simple update of the equivalent paragraph from RED-1 to reflect the extended use of GOs to cover all renewable energy under the new law.

Article 15.6 (2)
- e. the date on which the installation became operational; and
- f. the date and country of issue and a unique identification number.

Article 19.7 (2)
- e. the date on which the installation became operational; and
- f. the date and country of issue and a unique identification number.

Simplified information may be specified on guarantees of origin from installations of less than 50 kW.

Comparison
The RED-2 paragraph 19.7 introduces a size of installation (50kWh) below which GOs can give less detailed information.

<tr>
<td>Where an electricity supplier is required to prove the share or quantity of energy from renewable sources in its energy mix for the purposes of Article 3(6) of Directive 2003/54/EC, it may do so by using its guarantees of origin.</td>
<td>Where Member States have arranged to have guarantees of origin for other types of energy, suppliers shall always use for disclosure the same type of guarantees of origin as the energy supplied. Likewise, guarantees of origin created pursuant to Article 14(10) of Directive 2012/27/EC may be used to substantiate any requirement to prove the quantity of electricity produced from high-efficiency cogeneration. For the purposes of paragraph 2, where electricity is generated from high efficiency cogeneration using renewable sources only one guarantee of origin specifying both characteristics may be issued.</td>
<td>This new legal element clarifies that the same type of GO is used as the energy supplied. It also requires that where a unit of energy may have two attributes – e.g. electricity from high efficiency cogeneration using renewable sources – only one guarantee of origin may be issued specifying both characteristics. <strong>Both aspects of this new paragraph should lead to more robust and reliable use of GOs.</strong></td>
</tr>
</tbody>
</table>

Implementing Article 19, Recast Renewable Energy Directive

### Article 15.8
The amount of energy from renewable sources corresponding to guarantees of origin transferred by an electricity supplier to a third party shall be deducted from the share of energy from renewable sources in its energy mix for the purposes of Article 3(6) of Directive 2003/54/EC.

### Article 19
Deleted

### Comparison
This aspect of RED-1 is no longer required in the recast RED-2.
